

PHASE 1

BRAINSTORMING & IDEATION PHASE

The project provides an automated pipeline that integrates narrative generation (Gemini) with image synthesis (Local Diffusion) and layout formatting to instantly create exported PDF comic books from user prompts.

Objectives

- To automate the creation of comic book narratives using Gemini models.
- To generate contextually relevant comic panels using local diffusion image generation.
- To dynamically build comic layouts and export them to PDF format.

Expected Outcome

The expected practical outcome is a fully functional web-based tool capable of taking basic inputs and generating a complete, downloadable comic book PDF.
